

Assignment-3

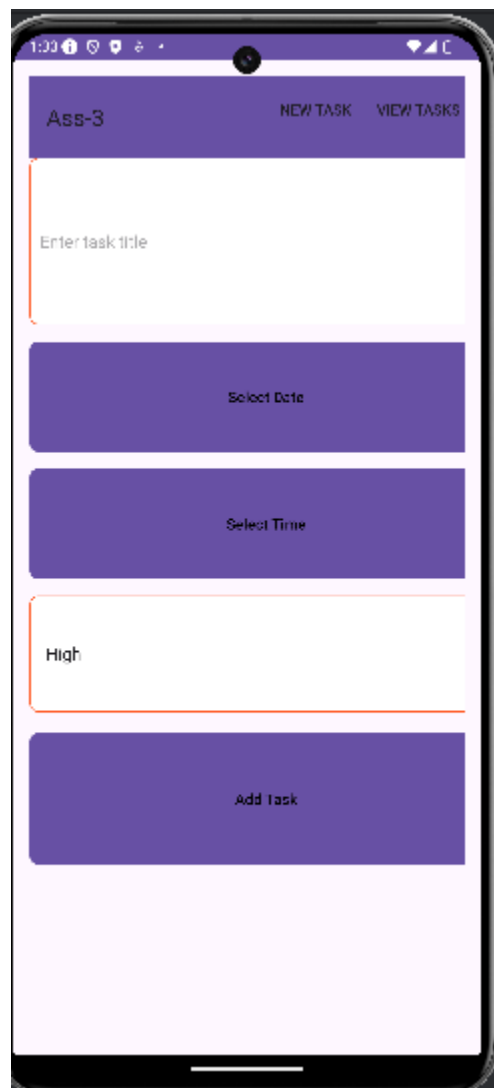

Name: Siddartho Sangkor Kirtonia

ID: 1224448

Introduction: This is a To-Do list app developed using android and kotlin.

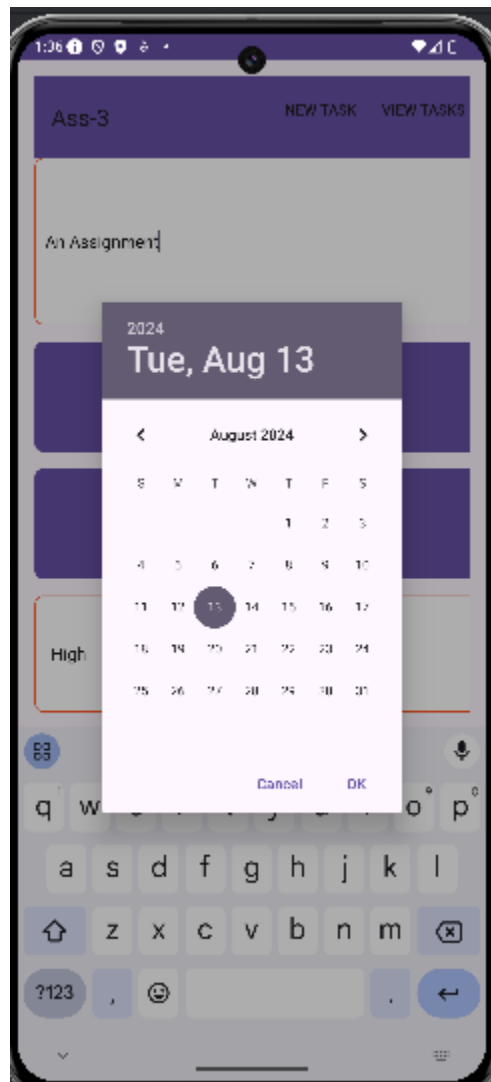

It has two activities. From first activity data will be passed using putExtra and the second activity will show the data. After receiving data from first activity a notification will be generated.

Description of GUI:

In the main interface there are two menu button “Add Task” and “View Tasks”.

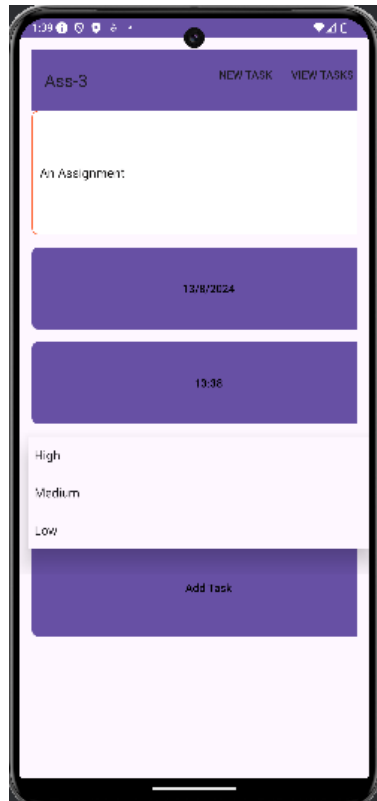

“View Tasks” will show the lists of tasks. In the front interface there is a text item to input the tasks.

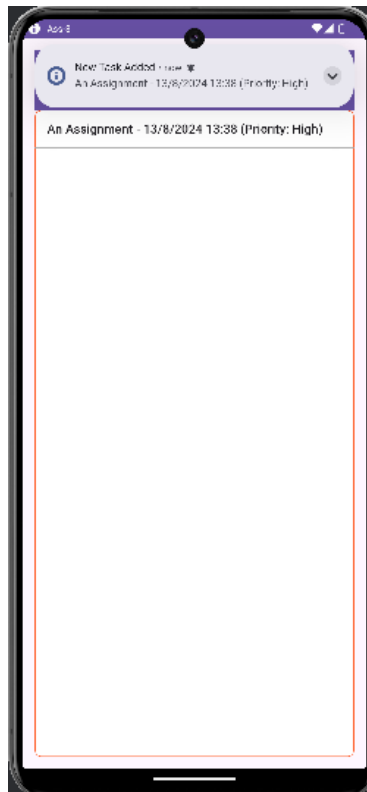

Then an input button which will show a calendar to input the date. Then a time input button to input the time to do the task.

There is another list item to input the priority.

By pressing “Add Task” a new window will be opened.

After receiving data in new activity a message notification will be shown and information is displayed.
